Wood Structural Panels (Plywood and OSB)

The actual dimensions of Wood Structural Panels are commonly less than the nominal dimension or call sizes. The associated thickness identified on each panel's grade stamp may also be different than the actual thickness. For example, 15/32in, 19/32in and 23/32in Wood Structural Panels may be commonly referred to as 1/2in, 5/8in and 3/4in, respectively. See table below for examples of common Wood Structural Panels:

Grade Stamp Nominal Dimension						Actual Average Wood Structural Panel Dimension				
3/8 in	X	4 ft	X	8 ft	=	11/32 in	X	3.98 ft	X	7.98 ft
7/16 in	X	4 ft	X	8 ft	=	13/32 in	X	3.98 ft	X	7.98 ft

23/32 in	X	4 ft	X	8 ft	=	11/16 in	X	3.98 ft	X	7.98 ft
3/4 in	X	4 ft	X	8 ft	=	23/32 in	X	3.98 ft	X	7.98 ft

Other Building Materials

Manufactured building products also commonly use nominal dimensions, call sizes, weights or other identifiers that differ from their actual dimensions. In many instances the actual dimensions of manufactured building products are less than the nominal dimensions, call sizes, weights or other identifiers used to describe them.

The actual dimensions and other characteristics of manufactured building products may be found in manufacturers' literature, catalogs and/or installation instructions, as applicable. Literature identifying the actual dimensions and other characteristics of manufactured building products may be requested from the manufacturer.

For additional information related to construction material dimensions and other characteristics we encourage you to review the following documents and publications:

- United States Department of Commerce Voluntary Product Standards PS 1, PS 2 and PS 20
- American Wood Council's National Design Specifications for Wood Construction Supplement – Design Values for WoodConstruction
- APA – The Engineered Wood Association – PRP-108 Performance Standards and Qualification Policy for Structural-UsePanels

Additionally, we encourage you to consult with an appropriately licensed Design Professional (Registered Architect or Professional Engineer) and Licensed General Contractor familiar with applicable Codes, standards and wood construction design for further advice and direction on selecting materials best suited for your project.

EZ Builder Greenhouse Kits

Add value to your home and enjoy your Alaskan summers!

- The SBS greenhouse kit is not totally pre-cut. Trusses and studs are pre-cut. Some other cutting is required.
- This kit does not have a floor. A floor kit is available as an option. If this greenhouse is to be set directly on the ground we recommend that treated 4 x 4's be placed below the bottom plate to protect against rot.

LP proudly offers a complete line of products to help you manufacture better outdoor structures with outstanding durability, value, beauty and flexibility!

ColorStrand

ColorStrand combines Northwest Factory Finishes' Proprietary processes with innovative equipment and specially-formulated PPG DURACOLOR machine applied finish. The result is a beautiful and extremely durable finish with exceptional consistency and a 30 year limited coating warranty. Northwest Factory Finishes is recognized by LP Corp. as a preferred prefinisher.

ColorStrand Deep Grain Collection employs a specialized two tone coating process that enhances the authentic cedar texture of LP SmartSide with depth and character. There are several unique colors available in stock on both LP SmartSide Lap siding and Great Random Shakes. Shakes are a full shade darker than the corresponding lap so that they provide an additional accent when paired together. This coating process cannot be reproduced by an onsite painter promising to make your home distinct.

Contact your local SBS for availability in your market.

Permanent Wood Foundation (PWF) System is a treated plywood and lumber foundation that installs in any weather. Builders have discovered advantages to include: savings in scheduling; installation by carpentry crews; reduction in material costs, especially where concrete is at a premium, and easy to insulate and finish as a conventional frame wall. The PWF system is all about quality, strength, ease of installation and comfort.

Howe Truss

Mono Truss or Half Truss

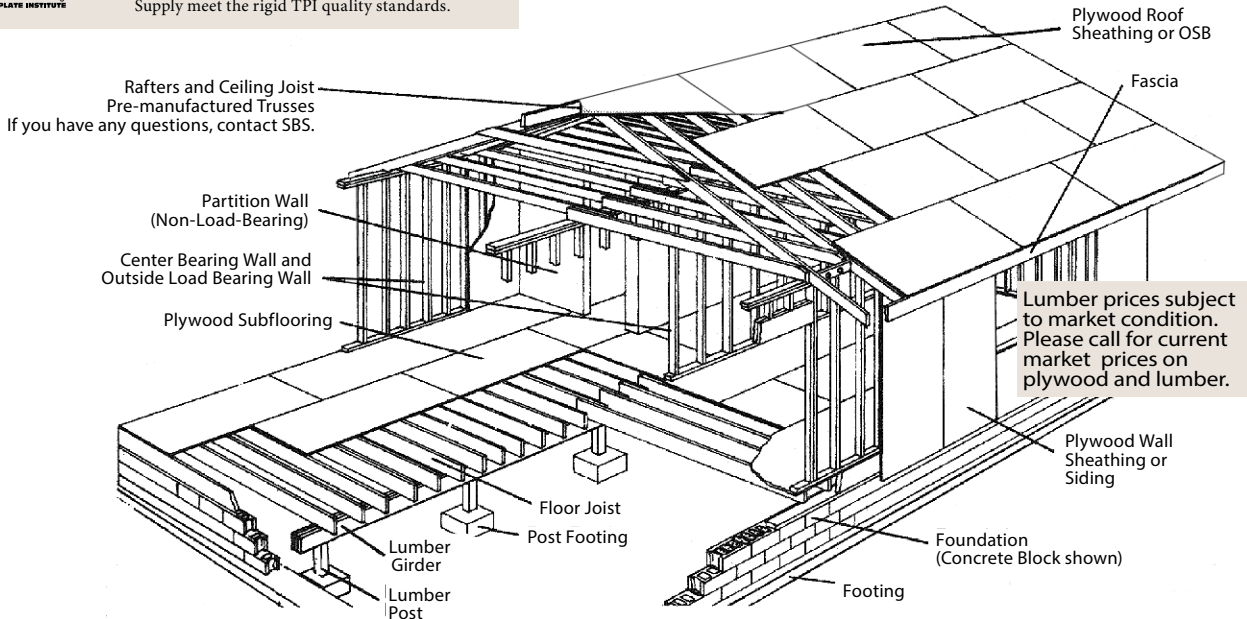

Flat Truss

SBS manufactures two types of support trusses, roof and floor. We offer professional engineering and unlimited design configurations in both products. Our most popular roof truss is the Howe Truss, which is made with a center king post, giving it superior strength and straightness in the top and bottom cords.

Monogram® Vinyl Siding

Monogram™ provides the look of wood siding, but does not require the upkeep common to wood. Monogram siding is manufactured with TrueTexture™ rough cedar finish molded directly from real cedar boards. Available in a selection of profiles, Monogram offers the industry's widest selection of colors. It is appropriate for use in new construction for single family homes, multi-housing projects and light commercial developments. Monogram is also an ideal product for remodeling.

- STUDfinder™: The patented STUDfinder Installation System combines precisely engineered nail slot locations with graphics. Nail slots are positioned 16" on center to allow for alignment with studs. STUDfinder graphics centered at each slot provide a quick and easy guide to help locate studs.
- RigidForm™: Monogram RigidForm 220 technology has a stiff, double-thick .092" nail hem for a straighter-on-the-wall appearance and wind load performance.

Silicone will withstand areas of ponding water without softening, bubbling or peeling from the substrate. Acrylic, urethane and asphalt roof coatings decompose and wear away from the stress of harsh sunlight, UV rays, and freeze-thaw cycles.

Silicone's unique chemistry creates a coating that will not degrade under ultraviolet light or from weather conditions. Silicone is an inert material, and does not decompose. As acrylic and urethane coatings age, they become dirty and stained from exposure to blowing debris, dust and dirt. The coatings require recoating to maintain a clean appearance. The smooth surface of GacoRoof silicone roof coating offers excellent resistance to mold, mildew and staining and does not require recoating. GacoRoof's reflective white surface resists ozone and UV rays.

GacoRoof® Silicone Roof Coating

- 100% silicone
- Ideal for most roof surfaces
- Withstands permanent ponding water
- Can be applied between 32F and 120F
- Not mailable

Gallon White GR1628 (GACSRC1) 11.2 lbs. **81.49**

5 Gal. White GR1600 (GACSRC5) 56.8 lbs. **399.99**

GacoRoof® Elastomeric Roof Coating

- Two gallons of GacoElastomeric provides the same coverage as a 5-gallon pail of most acrylic elastomerics, plus the added benefits and protection of a Gaco Silicone:
- BETTER COVERAGE. Higher solids than acrylics, more coating stays on the roof. One 2 gallon container of GacoElastomeric covers 100 sq. ft.
- CURES FAST. Can be rained on after just 2 hours and won't wash off the roof.
- WITHSTANDS PONDED WATER. Acrylics begin to soften in as little as 24 hours.
- REMAINS PERMANENTLY FLEXIBLE. Acrylics become hard and brittle, and often crack and leaks.
- IDEAL FOR FLAT ROOFS.
- 25-YEAR LIMITED MATERIAL WARRANTY.
- Use it to protect large and small buildings, homes, garages, patio covers, sheds, barns, mobile homes, RVs and more.

Because a typical kitchen countertop must withstand a range of abuses from vegetable chopping to plant potting yet remain smooth and sanitary with the wipe of a sponge, different work centers may call for unique surfaces. Consider the alternatives, then tailor each countertop to its specific purposes.

There are several ways to purchase countertops, depending on the material and your budget. Some laminates are available prefabricated in standard sizes; however most countertops are built to specifications. Your countertop will be made at our countertop manufacturing facility by experienced professionals. Pick the style right for you! For kitchen, vanity or bar - in dozens of popular color options.

Toyostove Kerosene Heaters Are Clean, Safe and Thermostat Controlled

A Laser Heater provides all the comfort and convenience of a central heating in one small, efficient unit at a fraction of the cost. It is also ideal for heating summer homes, hunting cabins, and is certified for installation in mobile homes and manufactured housing. The Laser heater combines the most advanced technology with the economy of kerosene heating. It features a simplified digital control panel that displays room temperature, temperature settings, time, and error codes. The unit is especially safe for children and pets as its cabinet is cool to the touch. All units feature a safety shut-off system. You can easily install a Laser heater in just an hour or two. The helpful owner's manual provides complete, step-by-step instructions. Several installation options are available. All units are U.L. approved for #1 fuel oil.

PLUMBING/HEATING

There's a PEX Fitting System For Every Plumbing Job...Production, Prefabrication or No-Flame Repair PEX Crosslinked Polyethylene Tubing

PEX tubing's versatility makes it perfect for many residential, commercial and industrial applications. It not only meets ASTM standards, but goes well beyond these requirements. PEX will handle all normal temperatures and pressures for residential potable water systems and radiant floor heating applications. PEX tubing stays flexible at all temperatures. It is easy to install year round. PEX tubing is practically inert. Nothing sticks to it. This means PEX resists mineral buildup, rust, corrosion, and electrolysis. PEX piping can be connected to galvanized, copper, polybutylene and CPVC systems with standard Sharkbite fittings. Here are just a few of the advantages offered by PEX tubing:

Trouble-Free PEX Tubing

- Flexible
- Corrosion resistant
- No electrolysis
- Freeze damage resistant

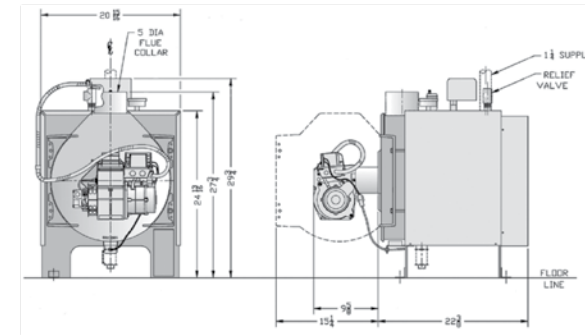

Crimp and Thread Connections

- No exotic parts to fail
- No solvents, bonding agents or "glues" used
- No flame, no solder, flux or gas used
- More positive connections, quicker, easier

SBS has everything you need for new and old sink replacement. These helpful diagrams identify the parts involved in sink replacement.

1. Measure the sink now in place. Note how many holes it has for faucets and hose sprayers as well as the distance these holes are apart. Example: If your kitchen faucet is a two-handle unit, the holes for the hot and cold are normally 8 inches apart.
2. Remove the trap assembly from the old sink by turning the top slip nut at the trap and tailpiece connection. If a garbage disposer is involved, turn off the power at the main electrical service entrance. Disconnect the power wires to the disposer and then unscrew the bolts that hold the disposer to the sink drain.
3. Turn off the water either at the supply stop valves at the bottom of the sink or at the main water service entrance.
4. Disconnect the water supply at the faucets. Remove bracket hardware from underneath the countertop if needed. Lift the sink out of the countertop hole.
5. Clean the countertop and set the new sink into position in plumber's putty. You may be able to connect the faucet assembly and the drain basket and tailpiece before you set the sink into the countertop.
6. If the sink is held by brackets, install them at this point.
7. Connect the faucet to the water supply pipes. Install the disposer to the sink drain opening with a bolted flange. Reconnect the wires and attach the unit to the trap. If there is no disposer, attach the tailpiece of the sink drain to the trap assembly.
8. Use plumber's putty to bed sink drains - it is recommended that you use stainless steel putty if the sink is stainless steel, to avoid spotting and damaging the surface.
